Dermaplaning

Dermaplaning - Full Face

(Cleanse, Cooling Mask, Red Photon Therapy)

535

Dermaplaning - Addon 30min to other treatments

(Addon dermaplaning to other facial treatments)

265

Benefits of Dermaplaning

- Provides deeper product penetration
- Removes soft facial hair that traps dirt and oils
- Promotes smoother skin
- Safe procedure for removing dead skin cells and “peachfuzz”
- Works on all skin types
- Manual skin exfoliation
- Instant results and no downtime

Dermaplaning is usually performed every three to four weeks. It is good to have the skin complete its normal rejuvenation cycle, which is thirty days, before going back and having the treatment done. The procedure generally will remove between two to three weeks of dead skin from the facial area.

People who suffer from active acne should not have dermaplaning performed.

Red Photon Light Therapy

- Anti ageing: increases collagen production.
- Reduces wrinkles.
- Improves skin elasticity.
- Repairs damaged skin and reduces post treatment healing time.

What effects does micro-needling have on the skin?

- Stimulates the production of collagen
- Improves the appearance of stretch marks
- Improves cellulite
- Reduces pore size
- Improves the quality and texture of the skin
- Reduces fine lines and wrinkles
- Improves the look of disfiguring scars from surgery, accidents or acne.

How many treatments do I need and how often ?

Micro-needling can be safely repeated every 4-6 weeks until you achieve the desired results. For collagen induction we recommend to start with 3 treatments, but with a minimum separation time of 4 to 6 weeks between treatments. For scar reduction an average of 3 to 6 treatments are recommended. The number of treatments required will depend on how each individual responds to the treatments, and the extent of the damage at the beginning.

Fractional Mesotherapy

Fractional Mesotherapy combines two concepts, the first being advance collagen stimulation therapy (Microneedling) and the second (Mesotherapy), the introduction of traditional pharmaceuticals, vitamins, minerals, growth factors, biomimetic peptides, and amino acids into the skin to target specific conditions.

Aftercare information

Immediately after the treatment you will look as though you have moderate sunburn and your skin may feel warm and tighter than usual. This will start to subside over the following 2-3 hours and will normally recover within 24-48 hours. Occasionally the redness may persist for 3-4 days. Use tepid water to cleanse the face for the following 48 hours and dry gently. Always make sure your hands and towels are clean when touching treated area. Avoid saunas, steam rooms, excessive exercise, hot baths or showers until the redness has gone. Also avoid aggressive skin products until the redness has subsided. Avoid intense sun light exposure and artificial UV exposure for period of at least 2 weeks after your procedure. Use a broad spectrum UVA and UVB sun protection with SPF 50 on daily basis during this period, even in the winter or on cloudy days.

The best of both techniques!

Powdered brows and hair strokes / microblading combined together to achieve beautifully natural yet defined brows.

The beginning of the brows and toward the middle is feathered with hair strokes which then transitions into a powdered effect to the tails of the brow which achieves perfect definition.

Hair strokes are also added around the outer line of the arch to soften the powdered tails. This technique can last 12 to 18 months depending on various factors which include but are not limited to skin type, and aftercare.
